

seneye slide soaker

A seneye slide soaker is a device that allows you to soak your seneye slide in your aquarium as opposed to a cup of aquarium water. This has the advantage that the water conditions are the same as when you fit your slide. This reduces the likelihood of a 'jump' on the readings when you fit a new slide as the readings stabilise.

A slide soaker can be purchased from [here](#) or at your [local store](#)
