

SWS box coming soon

The seneye web server (SWS) allows you to make any seneye device work more efficiently and effectively. It allows you to use a seneye without a PC and view the results direct from your smart phone, tablet, or computer.

Once connected you will get instant monitoring, not just across your home, but also the world via the seneye cloud.

There are two versions available, the [non WiFi version](#) which can be used with an ethernet cable connected to your internet router, or the [WiFi version](#) which comes with a WiFi adaptor allowing you to connect to your wireless network.

To use the SWS outdoors, a [seneye Dri box](#) is the simplest way to connect up everything next to the pond.
