

Your seneye device Magnetic Holder is designed to hold your seneye USB device securely in place using powerful neodymium magnets. The arrows on the front give an indication of where the device will see itself as "Out of Water" allowing you to position it to alert you if the water level drops.

Please note the following points before using your Magnetic Holder

Care should be taken when handling the powerful magnets.

Do not put your fingers between the magnets as this can lead to injury.

The magnets can "jump" onto each other if placed too closely together.

Place the holder in the desired position inside the aquarium and then fit the magnets to the outside of the aquarium.

Can be harmful to pacemaker wearers.
